P: (925) 351-8889

E: TyRobynWang@gmail.com

L: [linkedin.com/in/tyrobynwang](https://www.linkedin.com/in/tyrobynwang)

SKILLS

Languages & Frameworks: Ruby on Rails, Ruby, React, PostgreSQL, Javascript/Typescript, HTML, HTMX, CSS, Jest, Jasmine, RSpec, Selenium, Capybara, Puppeteer, Sidekiq

Tools: Heroku, Jira, ADO, GitHub, Pivotal Tracker, AWS, CloudFront, S3, VS Code, SendGrid, Metabase, Webpacker, Hubspot, ChurnZero, Cloudflare, CodeX, Render, Supabase, CircleCI, SMTP2Go

PROJECTS

LaidPlans, laidplans.com

April 2025 — Present

- Designed, built, and launched LaidPlans, a destination-first flight discovery platform that enables users to reverse-engineer trips based on destination rather than departure, surfacing routes and entry points traditional flight-search tools often miss; iterating on features, flows, and positioning based on user feedback.
- Developed the product end-to-end using Ruby on Rails and React/TypeScript, delivering core features across route discovery, interactive maps, and trip planning; implemented Sidekiq-based pipelines to scrape, integrate, and maintain up-to-date external travel datasets.
- Owned production readiness across Supabase/Postgres data storage, AWS/CloudFront asset delivery, deployment on Render, Cloudflare for CDN, performance, and security logging, and CI-backed Jest/RSpec test validation.
- Integrated AI-assisted workflows for debugging, data transformation, and automation, accelerating iteration and delivery.

PROFESSIONAL EXPERIENCE

PRODUCTPLAN, Remote

Lead Full Stack Engineer, April 2023 — July 2024

- Supported a multidisciplinary team of six in designing, developing, and maintaining high priority, product features by breaking down product requirements into achievable tasks in order to deliver on our goals and mitigate burnout risks
- Led cross team collaboration in expanding role permissions to the app's Team feature across product areas in company's transition from SMB to Enterprise customers, generating a 73.4% increase in feature usage in enterprise accounts
- Successfully executed first deliverable as new lead of the API/ Integrations team one sprint ahead of schedule, while mastering a new vertical and navigating a new code review process
- Prototyped and led the implementation of the two way dependency sync between the app and ADO's work items
- Facilitated crucial conversations over existing processes, increasing team communication and collaboration as a result
- Piloted the realignment of existing workflow with CI/CD best practices, providing other teams insight in their transition towards CI/CD
- Collaborated with staff+ engineers, product manager, and product design to ensure that architectural decisions align with future product deliverables and minimize tech debt and future development costs

Full Stack Engineer, January 2023 — April 2023

- Developed and maintained a full-stack web application using Ruby on Rails, React, Sidekiq, Elasticsearch, PostgreSQL, and Redis, incorporating service layer patterns and CI/CD best practices for automated testing and deployment
- Liaised with customer success to track and deliver BizOps feature requests in addition to planned product deliverables
- Maintained the company's HubSpot and ChurnZero integrations to allow better tracking of feature usage and churn

Associate Full Stack Engineer, February 2021 — January 2023

- Contributed to the design and development of Launch Management, the company's first enterprise-level feature, which acquired dozens of new customers and generated over \$100k in new revenue
- Leveraged Pusher to achieve real-time chat functionality in a Ruby on Rails and React-based application, resulting in a 20% increase in user engagement on user's content
- Independently owned an *Auto Scroll to Current Iteration* feature improving UX from conception to production release

CODEBREAKERS ACADEMY, Remote

Software Engineer Internship, 2020 - 2021

- Designed and implemented front-end development of web portal features such as landing page, user dashboard, and data management platform through Adobe Xd, integrating Python APIs, React/ ES6, Typescript, HTML/CSS, and Jest/ Enzyme testing
- Created accompanying Chrome Extension by manipulating existing DOMs and incorporating APIs
- Collaborated with back-end developers to create APIs, and to integrate new functions scaling UI, enhancing UX

EDUCATION

2020 | UC BERKELEY CODING BOOTCAMP 24 Week Intensive Full Stack Web Development Program

2018 | UNIVERSITY OF SOUTHERN CALIFORNIA - Annenberg School for Communication Journalism
Masters of Communication Management

2014 | UNIVERSITY OF CALIFORNIA, SANTA BARBARA BA Communication
